Manlift Ticket Moose Jaw

Manlift Ticket Moose Jaw - The Elevated Platforms and Manlifts Certification program helps to provide the needed training on the safe operating procedures, work practice, regulations and rules regarding the daily activities for the operators of this equipment. The course has been designed for people who are actively involved in these activities or individuals who have a basic understanding of this machine.

In the last couple of decades, manlifts and aerial platforms have become a common sight on construction job sites and in industrial maintenance applications. These machines provide an easy way to lift employees close to what must be done on a stable platform apparatus, enabling employees to carry out tasks with greater safety and comfort rather than being perched on top of scaffolding or ladders.

Similar to every other device, manlifts are just safe when they are utilized properly. Since they lift workers above ground level or floor, accidents could easily happen and this may result in serious death or injuries for both the manlift operators and any passerby who might be unlucky enough to be standing underneath.

There are a variety of models of manlifts. Nearly all fall into 1 of 2 categories: the articulating boom lift, that has the capability of both horizontal and vertical movement and the scissors lift, that is capable of moving up and down.
