Linde Forklift Parts

Linde Material Handling focuses in manufacturing forklifts and warehouse equipment. It is one of the largest manufacturing businesses on the planet. For over five decades, the firm has been raising the bar for industrial trucks, high performance material flow solutions, driver assistance systems and fleet management. Linde has produced a unique set of equipment designed to take care of individual buyer needs.

As one of the world leaders in manufacturing warehouse equipment and forklifts, the firm manufactures in Europe under the Linde and Fenwick brands. Joining the KION Group in 2006, Linde is among one of the leading suppliers for Intralogistics by providing automation solutions. The KION Group is additionally the 2nd largest manufacturer of industrial trucks across the world.

Operating in over one hundred countries around the globe with its' own branches, Linde is widely respected within the industry. There are assembly and production plants in China, Germany, the Czech Republic, France and the USA, along with over 700 service and sales vendors. The company's fleet is quite amazing. There are approximately 80 series with roughly 9000 equipment options and up to 20 model variants. Linde produces the fleet and their vehicles specifically customized to their customers demands.

Linde also manufactures high-performance choices for intralogistics with warehouse equipment, diesel and electric forklift trucks, automation solutions, fleet management software, financing options and driver assistance systems. The firm provides extensive operator certification and forklift services.

There have beenmany advancements in automation, digital networking and the demand for more specific equipment across numerous industries; contributing factors that are driving technological improvement within the intralogistics realm. Linde Material Handling strives to help its' customers meet and exceed their material management challenges. Customer care is very important at Linde. In fact, there is no product considered off the shelf. The company only implements technological innovations if they provide its' customers with a sustainable benefit.
